The concept of **RePlay Sustainable** products is based on the principle of **Reuse, Recycle, Replay** and means that the new series of **RePlay** toys is made entirely from raw materials obtained from consumer plastic waste, in a closed recycling proces using the latest technologies. Thanks to this, we contribute to reducing the amount of plastic in the world.

Every product from the **RePlay Sustainable**, just like the others Wader-Woźniak toys, stands out for its high quality, safety and durability, which means that they will accompany kids for a long time. RePlay toys are the perfect choice for those who wants to combine aesthetics and functionality with a environmentally friendly product. The **RePlay Sustainable** toy series has been composed of such products that will satisfy the need for our children to play at various stages of development, will accompany them in various places and fulfill an educational function in many ways.The concept of Sustainable means that our RePlay toys were created according to the rules sustainable development, involving awareness building development economically, with respect and care for the environment.
Production process using highest quality recyclate is a perfect example of rational use of materials and waste, without prejudice for quality and safety products.

100% RECYCLED PLASTIC

How is the closed recycling process going?
First, consumers dispose of recyclable plastic packaging in designated areas, using, for example, a yellow bin.
Then, consumer waste is collected and transported to the recycling plant, where it is carefully sorted.
Precise sorting of plastic waste is crucial for all subsequent stages of waste plastic recovery.
That's why high-quality, state-of-the-art sorting plants are an indispensable element of a sustainable infrastructure.

In the recycling plant, the packaging is sorted into different fractions using state-of-the-art. methods. The material is then washed, shredded and recycled into recyclate. From this raw material, we manufacture toys that can be recycled, so the fun can last forever!
Thanks to the possibility of producing toys from raw materials obtained from consumer waste, i.e. ordinary garbage, we not only give happiness to our children, but also care for the cleanliness of the environment and contribute to a better future for our planet.
